The Leader in Healthcare Payments Optimization

Payment Manager

Payment Manager is the hub for all things payment. From the front desk, back office, or even remotely, use it to take co-pays at the point-of-service, vault payment account preferences, create recurring or installment payment plans, track payment history, manage communications and more.

ePay Patient Portal

ePay is perfect for practices that want to offer patients a convenient, HIPAA-compliant and secure online place to pay open invoices with a credit or debit card. Providers simply send Patients an emailed invite to create a username and password for the portal. Patients can log in at any time to view and pay open invoices and any balances due. ePay features the Provider's logo for a more customized Patient experience.

Payment Sync

Payment Sync will sync payments taken in Payment Manager and ePay with certain locally-installed medical, dental, or allied health practice electronic health records (EHR) or practice management system (PMS). Providers can use Payment Sync to automate payment posting to a patient's EHR/PMS profile and reduce manual resources needed to process, track and research payments.

White-Glove Activation Service

Our Concierge service means you don't have to be an expert at healthcare payments or payment technology. Just send us a setup request. We do the rest including full implementation, training, and activation, plus keep you updated throughout the processs.
